

On the biology of the sand areas of Illinois (Bulletin of the Illinois State Laboratory of Natural History)

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907. Excerpt: ... Part III. Zoological Studies in the Sand Regions of the Illinois and Mississippi River Valleys. By Charles A. Hart. General Features. As a preliminary to the zoological discussion, the general topography of the principal sand areas, given in Part I. of these studies, may be briefly summarized. These areas occur on the glacial flood-plain of the broad central basin of the lower Illinois valley between Peoria and Meredosia, and of the upper Mississippi from near Burlington, Iowa, to Savanna, Ill., aggregating approximately 280 square miles in the Illinois valley alone; and considerable tracts of loose wind-blown surface sand, or blow-sand (Pl. X.-XV., XIX.), occur in both these areas, which in the Illinois basin are scattered in broad undulating tracts of dune formations, or in ridges running lengthwise of the valley, and reaching a maximum height of about one hundred feet. In Part II. Mr. Gleason has quite fully discussed the present condition of the surface of these areas in the Illinois valley and the effects of wind action in their intimate relation to the plant covering, and a knowledge of these conditions is necessary to an understanding of the sand fauna, which, of course, consists largely of insects and their near relatives. The areas of nearly pure sand are the only ones having a distinctly different flora and fauna from that of the ordinary Illinois prairie. They are most extensively developed upon the western half of the glacial flood-plain the half next the present river bottom. Here there is little or no surface drainage, the rainfall being quickly absorbed. After a rain the sand soon dries perfectly at the surface, both in winter and summer, thus approximating the conditions of an arid region notwithstanding the

greater precipitation. The stri...
