

A Simplified Forest Inventory and Analysis Database: FIADB-Lite

U.S. Forest Service Forest Inventory and Analysis (FIA) data are stored in the Forest Inventory and Analysis Database (FIADB). FIADB-Lite was developed to simplify the generation of forest statistics. An FIADB-Lite database can be used to generate estimates of forest land area and tree biomass, volume, growth, removals, and mortality. FIADB-Lite consists of five database tables: four tables currently in the FIADB (POP_EVAL_GRP, COND, TREE, and SEEDLING) that are described in the FIADB Users Guide Version 3.0 (Conkling, editor, draft), and one new table, PLOTSNAP
