

## The Law of Thought (Classic Reprint)

Excerpt from The Law of Thought Although the propositions discussed in the following pages are somewhat metaphysical, yet I think almost everything is made easy of comprehension. The application, too, is exceedingly practical, and is extended to every class of society and to every department of life, from the child to the individual of advanced years, and from the most humble to the most elevated pursuits. In short, the application extends as far as mind and thought and the various and numerous results of their operations. Mind moves everything, and thought moves mind. As are the thoughts, such are the motions and emotions. Good and evil, both natural and moral, result from the action of mind; the latter the direct, the former the indirect result. Sin could not be introduced into this world save by a moral agent belonging thereto. It is further shown that moral evil could not be introduced by force. While thoughts move mind, they do not destroy the power of choice; if they did, the action would neither be intelligent nor moral. Nor can that be intelligent action which is not the result of thought. The conclusions throughout are supported by scripture and fact. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

It includes principles behind law that make the law. Answers to these questions come from four primary schools of thought in general jurisprudence: . Strongly related to theories of natural law are classical theories of justice, beginning in the West with Platos Republic.
