

Community Development Quota (Cdq) and Open Access Pollock Fisheries in the Eastern Bering Sea: A Comparison of Discard Rates, Product Values, and Fish

In the 1970s the National Oceanic and Atmospheric Administration (NOAA) was made to manage our oceanic and atmospheric resources. The Alaska Fisheries Science Center is the research branch for marine life and coastal oceans off parts of the U.S. west coast and Alaska.

This includes the Eastern Bering Sea where some the worlds most important commercial fishing takes place. Their mission is to develop and maintain scientific exploration to help understand and manage that regions environment. Over the years there have been many reports published which discuss their findings; this is one of them.
