

# The Bear Family (Anfam) (Animal Families (Chelsea))

The ANIMAL FAMILIES series introduces readers to members within a variety of scientific family groups. Each book offers examples of body features and habits that the animals share, as well as unique characteristics that set them apart. Readers will learn about the animals size, location, habitat, and distinguishing features. How are grizzly bears and koalas the same? How are they different? Explore characteristics shared by most bears--short legs, small ears, sharp claws--and features that make them unique.
