

Elements of Science and Art, Vol. 2 of 2: Being a Familiar Introduction to Natural Philosophy and Chemistry; Together With Their Application to a Variety of Elegant and Useful Arts (Classic Reprint)

Excerpt from Elements of Science and Art, Vol. 2 of 2: Being a Familiar Introduction to Natural Philosophy and Chemistry; Together With Their Application to a Variety of Elegant and Useful Arts. Hitherto we have considered the action of bodies on each other in masses, or what is called their mechanical actions; and for this purpose it was not necessary to attend particularly to the difference in the many species or kinds of matter, which we distinguish more or less readily. But if we present bodies of different kinds to each other in proper circumstances, a certain action takes place between the minute particles of one sort of substance upon those of another sort, by which, frequently, the individual or peculiar properties of each disappear, and a new substance is formed. The study of this action of the minute or ultimate particles of different kinds of matter on each other is called chemistry, and the powers thus exerted occasion chemical actions.
