

Issues in Environmental Science and Technology Series Set: 2003-2014

Written by world experts in their specialised fields, this Series tackles important environmental topics, taking a multidisciplinary approach to pollution and environmental science and the chemistry of environmental processes. The Series also focuses on broader issues, notably economic, legal and political considerations. Authors are drawn from industry, the public service and academic organisations. The books are invaluable for scientists and engineers in industry and public service, consultancy and academic institutions, who wish to keep up-to-date on topical subjects in this field. They are also essential reading for students taking specialised courses in environmental chemistry, and provide supplementary reference material for general science courses.
