

Descriptive Botany: A Practical Guide, to the Classification of Plants, With a Popular Flora (Classic Reprint)

Excerpt from *Descriptive Botany: A Practical Guide, to the Classification of Plants, With a Popular Flora* By the common practice of the schools, pupils often go through the botanical text-books with only the most incidental attention to the real objects of study. As there is no training in observation, there can be no attempt at the exercise of the reason and judgment of the learner upon the results of observation. To attain this important end, botany must be studied in its actual objects. The characters of plants must become familiarly known by the detailed and repeated examination and accurate description of large numbers of plants. The pupil must proceed step by step in this preliminary work - digesting his observations, and making the facts his own. From the beginning he will be engaged in comparing his observations, and reasoning upon his facts. As he extends his knowledge, the work of comparison and grouping calls for a higher exercise of thought. In the final classification of plants, problems of increasing complexity arise. Plants are to be placed in groups subordinate to each other, when judged by masses of resemblances, by likenesses, and differences of unequal values, which involve the exercise of the best powers of the mind. That the habit of systematic arrangement, in which the study of botanical classification affords so admirable a training, is equally valuable in methodizing all the results of thought, is testified to as a result of his own experience by that eminent authority, Mr. John Stuart Mill. He was a regular field botanist, and cultivated the subject with a view to its important mental advantages. In the second volume of his *System of Logic* Mr. Mill says; Although the scientific arrangements of Organic nature afford as yet the only complete example of the true principles of rational classification, whether as to the formation of groups or of

series these principles are applicable to all cases in which mankind are
