

The Crooked Mile: Through peak oil, biofuels, hybrid cars, and global climate change to reach a brighter future

Americans love their automobiles. More than a mode of transportation, cars provide us with freedom, social equality, and entertainment. The price we pay for our infatuation with four wheels is high. Air pollution, global climate change, energy insecurity, injury and death, and urban sprawl are fair charges against the automobile. Some critics suggest we abandon the automobile. This is not likely.

In *The Crooked Mile*, award-winning journalist and author, Kevin Clemens, examines the past, present, and future of energy and infrastructure to take us through the challenges of depleting oil, global climate change, innovative automotive technologies, and new concepts in personal mobility to reach a better transportation future.
