

An Evaluation of Biological Inventory Data Collected at Pea Ridge National Military Park: Vertebrate and Vascular Plant Inventories: Natural Resource Technical Report NPS/HTLN/NRTR?2009/261

As part of the National Park Services effort to improve park management through greater reliance on scientific knowledge, a primary role of the Inventory and Monitoring (I&M) Program is to collect, organize, and make available natural resource data. The I&M Programs Heartland Network (HTLN) recently completed inventories of vertebrate species and vascular plants at Pea Ridge National Military Park (PERI). In doing so, all existing data were cataloged, targeted field investigations were conducted, and species lists were certified by taxonomic experts. The primary goal of these efforts was to document at least 90% of the vertebrate and vascular plant species believed to occur in the park. This report provides a summary of results.
